Customer Review Report

Faculty Name: Naveen Chandra Gowda sir

Inputs from Customer

1. Frequency of Course Structure Updates

Course structures are typically updated once per academic year or whenever there are significant changes in industry or market requirements. Updates are made subject-wise and depend on the nature of the course, whether it is coding-oriented or theory-based.

2. Responsibility for CO-PO Mapping

The CO-PO mapping process is carried out collaboratively by a team comprising university faculty, industry experts, and members of the Board of Studies. The final structure is further reviewed and scrutinized by alumni.

3. Time Required to Design a Course Structure

If the course structure is developed from scratch without any previous reference material, it requires a minimum of 20 days, assuming approximately 2 hours of work per day. If only updates, refinements, or minor changes are required, the process can be completed within a week.

4. Engagement Hours for a 3-Credit Subject

A 3-credit subject involves approximately 40 hours(average) of engagement per faculty.

5. Tools Used by Professor

Professors typically rely on a combination of previous years' materials, expert consultation, and inputs from industry professionals. However, this process remains largely manual and can vary significantly depending on the individual faculty member.

Pain Points

How to determine relevance of the material generated.

Feedback

Change in credits will also lead to changes in content of the material. Hence to identify the type of content to be included according to the credits of the subject is important.
