CUSTOMER Review Report

Faculty Name: Rakesh Sir

INPUTS FROM CUSTOMER

1. Frequency of Course Structure Updates

Course structures are typically updated once per academic year or whenever there are significant changes in industry or market requirements. Updates are made subject-wise and depend on the nature of the course, whether it is coding-oriented or theory-based.

2. Responsibility for CO-PO Mapping

The CO-PO mapping process is carried out collaboratively by a team comprising university faculty, industry experts, and members of the Board of Studies. The final structure is further reviewed and scrutinized by alumni.

3. Time Required to Design a Course Structure

It takes around a day(24hours) to design a course an average of 6-8 owrking hours on daily. A fresh course or new course might take 2-7 days to design including the co-po mapping and matching the blooms level.

4. Engagement Hours for a 3-Credit Subject

A 3-credit subject involves approximately 40 hours average of engagement per faculty.

5. Tools Used by Professors

Professors utilize a combination of previous years' materials, expert advice, and inputs from industry experts. The process is largely manual and may vary depending on the individual faculty member.

PAIN POINTS

The course material should be assessed to ensure that it meets the criteria set by the guidelines prescribed by the AICTE. Adherence to these guidelines is important to maintain the academic quality.

FEEDBACK

The guidelines and recommended materials of AICTE are subject to periodic updation and revision. Therefore, it is of utmost importance to update the course content to keep it aligned with the latest guidelines.

The academic content, which might have been relevant a few years ago, might no longer be relevant at present. Therefore, the course materials and the reference books must be updated regularly to include:

1. Latest technologies
2. Latest industry practices
3. Latest pedagogical practices

The course materials must align with the current industry requirements, ensuring that the students acquire the skills required by the industry.

Newly introduced courses must strictly adhere to the latest guidelines of AICTE, ensuring that the course materials are updated from the beginning to avoid any inconsistencies in the future

CONCLUSION

The design of course structures and CO-PO mapping is of critical importance but is currently a time-consuming process, with results depending on the expertise of the person doing the task. The frequent changes to the AICTE guidelines and industry requirements necessitate the regular updation of the curriculum to make it relevant.-
